Sequence 15, Application US/08525864A

Patent No. 5912326

GENERAL INFORMATION:

APPLICANT: Chang, Han

TITLE OF INVENTION: Related thereto

NUMBER OF SEQUENCES: 18

NUMBER OF SEQUENCES: 18

CORRESPONDENCE ADDRESS:

ADDRESSEE: LAHIVE & COCKPIELD

STREET: 28 State Street
                                                                                                   COMPUTER KEADABLE FORM

MEDIUM TYPE: IBM PC compatible
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFFWARE: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/033.2,704
FILING DATE: 28-Jan-2003
CLASSIFICATION: 536
PRIOR APPLICATION DATA:
APPLICATION NUMBER: US/08/358,556A
FILING DATE: 14-DEC-1994
APPLICATION NUMBER: R 9315164
APPLICATION NUMBER: R 9315164
APPLICATION NUMBER: R 9315164
APPLICATION NUMBER: R 9315164
TELERATION NUMBER: 10-DC-1993

Sequence 6, Application US/08618408B
Sequence 6, Application US/08618408B
Patent No. 5851815
GENERAL INFORMATION:
APPLICANT: Alnemri, Emad S.
APPLICANT: Fernandes-Alnemri, Teresa
APPLICANT: Tomasalli, Kevin
TITLE OF INVENTION: Proteases, Nucleic Acids Encoding and Methods of Use
NUMBER OF SEQUENCES: 63
CORRESPONDENCE ADDRESS:
ADDRESSEE: Campbell and Plores
STREET: 4370 La Jolla Village Drive, Suite 700
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     0.3%; Score 17; DB 1; Length 17;

Patent No. 6271361

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Alnemri, Emad S.
APPLICANT: Fernandes-Alnemri, Teresa
APPLICANT: Litwack, Gerald
ITILE OF INVENTION: Apoptotic Protease Mch6, Nucleic Acids
ITILE OF INVENTION: Encoding Same and Methods of Use
NUMBER OF SEQUENCES: 87
CORRESCONDENCE ADDRESS:
ADDRESSES: Campbell & Flores LLP
STREET: 4370 La Jolla Village Drive, Suite 700
CITY: San Diego
STATE: California
COUWTRY: United States
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DB 1; Length 17; 57;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      0; Indels

Application US/08630822A
Patent No. 5840695
GENERAL INFORMATION:
APPLICANT: FRANK, GLENN R.
APPLICANT: WALLENFELS, LYNDA
TITLE OF INVENTION: NOVEL ECTOPARASITE SALIVA PROTEINS
TITLE OF INVENTION: AND APPARATUS TO COLLECT SUCH PROTEINS
NUMBER OF SEQUENCES: 107
CORRESPONDENCE ADDRESS:
ADDRESSEE: Sheridan Ross P.C.
STREET: 1700 Lincoln Street, Suite 3500
Ouery Match 0.3%; Score 17; DB 1; Length 20; Best Local Similarity 100.0%; Pred. No. 69; Matches 17; Conservative 0; Mismatches 0; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 0.3%; Score 17; DB 1; Length 20; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 23, Application US/09005069

Patent No. 5332470

GENERAL INFORMATION:

APPLICANT: FRANK, GLENN R.

APPLICANT: WALLENFELS, LYNDA

TITLE OF INVENTION: NOVEL ECTOPRASITE SALIVA PROTEINS

TITLE OF INVENTION: AND APPARATUS TO COLLECT SUCH PROTEINS

NUMBER OF SEQUENCES:

ADDRESSEE: Sheridan ROSS P.C.
TITLE OF INVENTION: NOVEL ECTOPARASITE SALIVA PROTEINS AND TITLE OF INVENTION: APPARATUS TO COLLECT SUCH PROTEINS NUMBER OF SEQUENCES: 26
CORRESPONDENCE ADDRESS:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 52, Application US/09250848

Sequence 52, Application US/09250848

Patent No. 6153814

GENERAL INPORMATION:
APPLICANT: Baum, James A.
APPLICANT: Glimer, Amy Jelen
APPLICANT: Mettus, Anne-Marie Light
TITLE OF INVENTION: Bacillus thutinglensis CrylC
TITLE OF INVENTION: Compositions Toxic to Lepidopter;
TITLE OF INVENTION: Making CrylC Mutants
NUMBER OF SEQUENCES:
CORRESPONDENCE ADDRESS:
ADDRESSEE: Arnold, White and Durkee
STREET: P.O. Box 4433
                                                                                                                                                   ZIP: 77210

COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PatentIn Release #1.0, Version #1.30

CURRENT APPLICATION NUMBER: US/09/314,093
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          COUNTRY: USA

GENERAL INFORMATION:
Bether No. 6410324
GENERAL INFORMATION:
APPLICANT: Andrew T. Watt
APPLICANT: Andrew T. Watt
TITLE OF INVENTION: ANTISENSE MODULATION OF TUMOR NECROSIS FACTOR RECEPTOR 2 EXPRESSIFILE REFERENCE: RTS-0216
CURRENT APPLICATION UMBER: US/09/844,634
CURRENT PLING DATE: 2001-04-27
NUMBER OF SEQ ID NOS: 174
       APPLICANT: Castro, Stephanie
TITLE OF INVENTION: Nanocrystals having polynucleotide strands and their use to form
TITLE OF INVENTION: dendrimers in a signal amplification system
FILE REPREBLOCE: B-73
CURRENT PILING DATE: 2001-07-13
PRIOR PAPLICATION NUMBER: 09/437076
PRIOR PAPLICATION NUMBER: 09/437076
PRIOR PLING DATE: 1999-11-09
PRIOR FILING DATE: 1999-11-10

Sequence 31, Application US/09308003
Patent No. 6326170
GENERAL INPORMATION:
APPLICANT: Burnham, Martin K. R.
APPLICANT: Lonetto, Michael A.
TITLE OF INVENTION: PARINE, V.
TITLE OF INVENTION: POLYPEPTIDES AND THEIR USES
FILE REPERENCE: GMN 1093
CURRENT APPLICATION NUMBER: US/09/308,003
CURRENT FILING DATE: 1999-05-10
EARLIER PRILING DATE: 1997-09-12
NUMBER OF SEQ ID NOS: 52
SOFTWARE: PASSEG for Windows Version 3.0
LENGTH: 19
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DB 1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Mismatches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 6. Application US/09439616

Patent No. 630612

GENERAL INVORMATION:

APPLICANT: Schwarz, Margaret A.

APPLICANT: Schwarz, Margaret A.

APPLICANT: Gebb Sarah A.

TITLE OF INVENTENCY: Exhaps on Vascularization

CURRENT FILIG DATE: 1999-11-12

BARLIER PEPRENCE: 1999-11-12

BARLIER PPLICATION NUMBER: 60/108,435

BARLIER FILING DATE: 1998-11-13

NUMBER OF SEQ ID NOS: 12

SOFTWARE: Patentin Ver. 2.0

LENGTH: 21
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ; OTHER INFORMATION: Description of Artificial Sequence: primer US-09-439-616-6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                0.3%; Score 16; DB 1; Length 20;

Sequence 1, Application US/09065058

Patent No. 6255056

GENERAL INFORMATION:
APPLICANT: ABE, SHIZHOKA

APPLICANT: SATO, YOSHIHIRO
ITILE OF INVENTION: SOLID PHASES FOR DETECTION OF TARGET NUCLEIC
ITILE OF INVENTION: ACIDS, PREPARATION METHODS OF
ITILE OF INVENTION: DETECTING TARGET NUCLEIC ACIDS
NUMBER OF SEQUENCES: 16

RESULT 103 US-09-645-021-5

```
TSUTOMU
THOMS SUPPRESSOR GENE AND METHODS FOR
DETECTION OF CANCER, MONITORING OF TUMOR PROGRESSION AND CANCEF
TREATMENT
APPLICANT: Butler, John H.

APPLICANT: Breman, Thomas M.

TITLE OF INVENTION: METHOD APPARATUS FOR IN SITU SYNTHESIS ON A SOLID SUPPORT FILE REFERENCE: 05871.002.CPUS04

CURRENT APPLICATION NUMBER: US/09/645,021

CURRENT FILING DATE: 2000-08-23

PRIOR FILING DATE: 1999-05-18

PRIOR FILING DATE: 1999-05-18

PRIOR FILING DATE: 1995-06-06

NUMBER OF SEQ ID NOS: 10

SOFTWARE: PRIOR THOMASI: 100

Sequence 1N. 6828142

GENERAL INFORMATION:

APPLICANT: Barbera-Guillem, Emilio

APPLICANT: Castro, Stephanie

TITLE OF INVENTION: Manocrystals having polynucleotide strands and their use to form

TITLE OF INVENTION: Manocrystals having polynucleotide strands and their use to form

TITLE OF INVENTION: Manocrystals having polynucleotide strands and their use to form

TITLE OF INVENTION: dendrimers in a signal amplification system

FILE REFERENCE: B-73

APPLICANT: Ferrero, Richard L.
APPLICANT: Priberge, Jean-Michel
TITLE OF INVENTION: IMMUNOGENIC COMPOSITIONS AGAINST
TITLE OF INVENTION: HELICOBACTER INFECTION, POLYPEPTIDES FOR USE IN THE
TITLE OF INVENTION: POLYPEPTIDES
TITLE OF INVENTION: POLYPEPTIDES
NUMBER OF SEQUENCES: 44
CORRESPONDENCE: 44
Sequence 8, Application US/09357070

Sequence 8, Application US/09357070

Patent No. 6046049

GENERAL INFORMATION:
APPLICANT: Brett P. Monia
TITLE OF INVENTION:
TITLE OF INVENTION: NATISENSE MODULATION OF PI3 KINASE P110 DELTA EXPRESSION
FILE REFERENCE: RTS-0076
CURRENT APPLICATION NUMBER: US/09/357,070
CURRENT FILING DATE: 1999-07-19
NUMBER OF SEQ ID NOS: 47

LENGTH: 20

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 6, Application US/08466248

Patent No. 6258359
GENERAL INFORMATION:
APPLICANT: Labigne, Agnes
APPLICANT: Sauerbaum, Sebastien
APPLICANT: Ferrero, Richard L.
APPLICANT: Friberge, Jean-Michel
TITLE OF INVENTION: IMMUNOGRNIC COMPOSITIONS AGAINST
TITLE OF INVENTION: POLYPEPTIDES FOR USE IN THE
TITLE OF INVENTION: POLYPEPTIDES
NUMBER OF SEQUENCES: 44
CORRESPONDENCES: 44
ADDRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                               ö

Sequence 6200, Application US/09422978

Patent No. 6537751

GENERAL INFORMATION:

APPLICANT: Cohen, Daniel

APPLICANT: Chumakov, 11ya

TITLE OF INVENTION: Biallelic markers for use in constructing a high density...

FILE REFERENCE: GENSET, 0220CP1

CURRENT FILING DATE: 1999-10-20

EARLIER FILING DATE: 1999-04-21

SEARLIER APPLICATION NUMBER: US 60/109,732

EARLIER PILING DATE: 1998-11-23
